TANNER BJORGAN

SOFTWARE DEVELOPER | FULL-STACK | FRONTEND

250-878-8557 | tannerbjorgan@gmail.com | linkedin.com/in/tanner-bjorgan-613408194

PROFESSIONAL SUMMARY

Full-stack software developer who built and commercialized a production SaaS platform from zero to 3,000+ users and peak $24,000 monthly revenue. Experienced across React/TypeScript frontend development, Node.js/tRPC services, PostgreSQL data design, authentication, payments, AI retrieval, third-party APIs, and product delivery.

CORE SKILLS

Software Development • Full-Stack Development • Frontend Development • React • TypeScript • JavaScript • Node.js • tRPC • PostgreSQL • REST APIs • API Integration • OAuth • Stripe • Webhooks • RAG • pgvector • SPA Architecture • A/B Testing • PostHog • Git • CI/CD • SDLC • Technical Documentation • GDPR / FIPPA

PROFESSIONAL EXPERIENCE

Founder | Scribeist - Self-Funded SaaS Platform, 3,000+ Users **Nov 2024 - Present**

- Commercialized a consumer SaaS product from zero to 3,000+ users and a peak $24,000 in monthly revenue by owning product strategy, requirements, delivery, launch, customer feedback, and day-to-day operations.
- Built the production platform end to end with React, TypeScript, Node.js, tRPC, PostgreSQL, Stripe, OAuth, webhooks, and third-party APIs, while managing infrastructure and system reliability.
- Opened a new acquisition channel by earning an invitation to AppSumo Select, negotiating the partnership, preparing the campaign, and coordinating launch marketing.
- Ran segmented email marketing for AppSumo users, standard users, and company-wide notices; created ads, social posts, landing-page content, and supporting product documentation.
- Improved product usability and conversion by owning UI/UX, gathering customer feedback, running product demos, supporting integrations, and using PostHog A/B tests to guide interface changes.

Technical Program Lead / Lead Developer | UBC Capstone Program **Apr 2025 - Aug 2025**

- Led a cross-functional team through the full SDLC to deliver an Exam Generation & Integrity platform that placed 1st in the engineering cohort and received consideration for university-wide deployment.
- Translated stakeholder needs into prioritized requirements, sprint plans, development tasks, and delivery milestones while acting as the primary bridge between the team and project stakeholders.
- Aligned the project with FIPPA, GDPR, California privacy requirements, and university data-retention rules by incorporating compliance constraints into architecture and delivery decisions.
- Improved team execution by maintaining work logs, preventing task overlap, resolving team issues, mentoring developers, and enforcing structured peer review and technical documentation.

AI Data Analyst | TELUS Digital AI Data Solutions **Jul 2025 - Jan 2026**

- Improved AI model reliability by curating, validating, and synthesizing training data and auditing model outputs against accuracy, relevance, quality, and safety criteria.
- Evaluated multimodal tasks spanning maps, search, ads, and speech, then converted findings into structured feedback for AI engineering teams.

EV Assembly Technician | Hexagon Purus **Jul 2019 - Jan 2021**

- Doubled PDU build completion rate versus the previous technician by independently owning battery-pack subassembly work and partnering with engineers on system testing and safety validation.
- Assembled manifolds, cooling hoses, battery-pack covers, CNG tank covers, shipping crates, and electrical components using production tools and documented assembly processes.
- Supported engineering validation by building PDUs, testing installed programming in commercial vehicles, and assisting with water-seal and fire-prevention testing.
- Supported inventory administration and material readiness in a small production team where technicians regularly shifted between assembly, testing, and logistics tasks.

EDUCATION

Computer Science | University of British Columbia **2019 - 2025**
